

# Flow thru

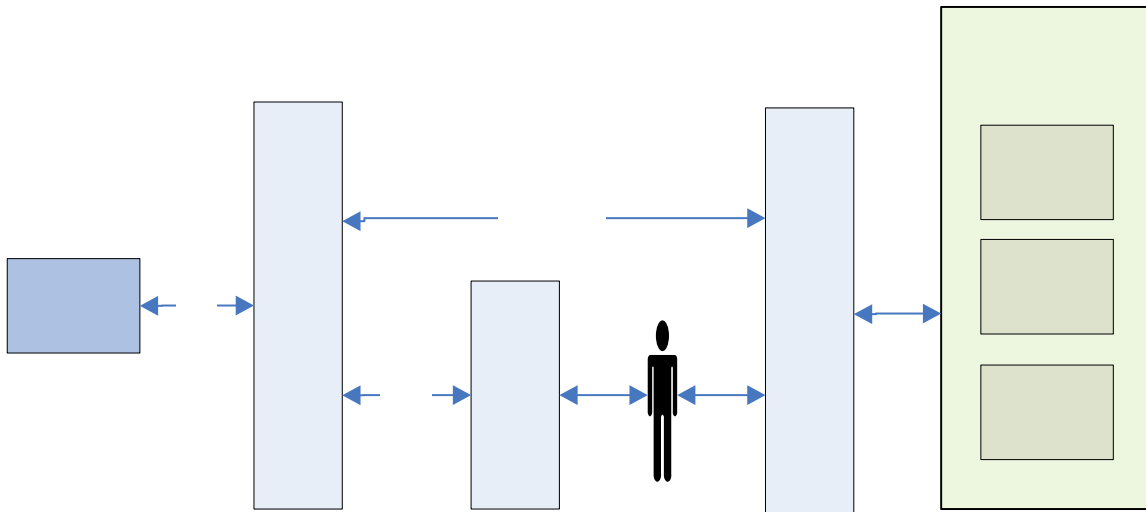

## Overview

### What It Is

FairPoint's Wisor system will work with MetaSolv the ordering management system to allow for orders to process without manual handling.

### How It Works

Orders will be entered either through the Web Gui or via E-bonding and enter in Wisor. Wisor will submit the orders downstream through OM to do a business rule verification, Inventory management verification and finally to process the service order. See Chart Below.

### Manual Handling

### LSR's

The following order types have been identified to fallout to manual handling due to the complexity of processing these orders.

- Resale Private Line (KB)
- Resale Frame Relay (LB)
- DID/DOD/PBX (NB)
- Centrex Resale (PB)
- ISDN (QB)
- AIN Service (RB)
- LIDB (SB)
- Unbundled Local Switching (FB)

All other order types will process via flow thru this will consist of the following Req Type's (AB, BB, CB, DB, EB, JB, MB). These orders if all information is correct on the account and on the LSR will require manual handling by the ICSC representative.

**ASR's**

On the ASR side you will follow the same process as the LSR, you will no longer utilize CSG but use the same gateway Wisor for your order processing. This will include Ethernet Solutions, Optical Ring Solutions, Entrance Facility, Private Line, Voice Services, Interconnection, Resale and UNE Services.

Product Specification for ASR Flow Thru will be posted to document prior to close.
